ASSIGNMENT 4

NEURAL NETWORKS AND DEEP LEARNING

1. Data Manipulation

- a. Read the provided CSV file 'data.csv'.
- b. https://drive.google.com/drive/folders/1h8C3mLsso-R-sIOLsvoYwPLzy2fJ4IOF?usp=sharing

c. Show the basic statistical description about the data.

[7]	<pre>#(c) Show the basic statistical description about the data. dst_Data.head()</pre>					
		Duration	Pulse	Maxpulse	Calories	
	0	60	110	130	409.1	
	1	60	117	145	479.0	
	2	60	103	135	340.0	
	3	45	109	175	282.4	
	4	45	117	148	406.0	

d. Check if the data has null values.

```
dst_Data.isnull().any()
Duration
            False
Pulse
            False
Maxpulse
            False
Calories
             True
dtype: bool
   dst_Data.fillna(dst_Data.mean(), inplace=True)
   dst_Data.isnull().any()
            False
Duration
            False
Pulse
Maxpulse
            False
Calories
dtype: bool
```

d(i). Replace the null values with the mean

```
column_means = dst_Data.mean()
> <
        print(column_means)
        dst_Data = dst_Data. fillna(column_means)
        print(dst_Data.head(20))
    Duration
                  63.846154
     Pulse
                 107.461538
    Maxpulse
                134.047337
                 375.790244

     Duration
                 int64
     Pulse
                 int64
     Calories
                 int32
     dtype: object
```

k. Using pandas create a scatter plot for the two columns (Duration and Calories).

2. Linear Regression

a. Import the given "Salary_Data.csv"

```
dst_Sal = pd.read_csv('C:\\Users\\dines\\Downloads\\Salary_Data.csv')
   dst_Sal.info()
dst_Sal.head()
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 30 entries, 0 to 29
Data columns (total 2 columns):
     Column
                      Non-Null Count Dtype
     YearsExperience 30 non-null
                                        float64
 0
     Salary
                       30 non-null
                                        float64
dtypes: float64(2)
memory usage: 608.0 bytes
    YearsExperience
                      Salary
 0
                     39343.0
                1.1
                     46205.0
                1.3
                1.5
                     37731.0
                     43525.0
                     39891.0
```

b. Split the data in train_test partitions, such that 1/3 of the data is reserved as test subset

c. Train and predict the model

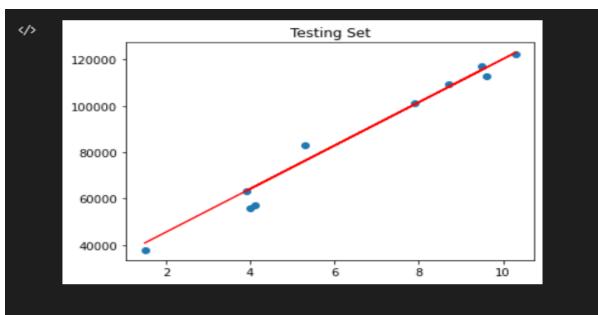

d. Calculate the mean_squared error

```
# (d) Calculate the mean_squared error
S_error = (B_Pred - B_test) ** 2
Sum_Serror = np.sum(S_error)
mean_squared_error = Sum_Serror / B_test.size
mean_squared_error

[25]
... 21026037.329511296
```

e. Visualize both train and test data using scatter plot.

```
> <
         import matplotlib.pyplot as plt
         plt.scatter(A_train, B_train)
         plt.plot(A_train, reg.predict(A_train), color='red')
         plt.title('Training Set')
         plt.show()
        plt.scatter(A test, B test)
        plt.plot(A_test, reg.predict(A_test), color='red')
        plt.title('Testing Set')
         plt.show()
                              Training Set
      120000
      100000
       80000
       60000
       40000
                           4
                                    6
                                             8
                                                     10
```
